Based on local government boundaries effective March 2008

First release 2006 Census data

Most data from the 2006 Census will be released on a 'place of usual residence' basis – that is, according to where people normally live. For the 2001 Census most data was released on a 'place of enumeration' basis – that is, according to where people were on Census night. However, data on both bases are available from both Census years.

The figures in the table below illustrate the differences between these concepts, and the difference between these and the concept of 'estimated resident population'. For some locations, the number of persons counted at the Census is important because that figure includes visitors. For other areas, or for other purposes, the number of usual residents is a more appropriate measure. In all cases, the estimated resident population (which includes an allowance for persons not counted at the Census) is regarded as the 'official' population (see explanatory notes). Except where indicated, the population data in this fact sheet is based on the place of usual residence, while all dwellings data is based on place of enumeration.

Population summary

(c) This data is based on place of enumeration.

(d) Includes persons counted in 'migratory, offshore and shipping' Collection Districts as well as those in non-private dwellings such as hotels and hospitals.

- Over the five years to 2006 the number of children aged 0-14 years decreased by 50 (1.7%) and the proportion of these children in the population fell from 24.2% to 23.6%. The population aged 75 and over increased by 73 (13%) and grew from 4.6% of the population in 2001 to 5.2% in 2006.
- The number of persons attending an educational institution increased by 6.3% over the 2001-06 period.
- The proportion of secondary students attending non-government schools rose from 19.0% in 2001 to 37.2% in 2006 while for infant and primary students the proportion in government schools fell from 68.3% to 58.8% over the same period.
- The number of students at TAFE or university decreased by 38.7%.
- In the five years to 2006 the proportion of persons in the Roma region who were born in Australia declined from 96.5% to 96.1%. During this period the population who were Australian citizens decreased by 4%.
- In 2006 6.3% of persons were counted in non-private dwellings, compared with 4.3% in 2001.

Explanatory notes

- Estimated Resident Population (ERP) is derived from census usual residence counts, by making three adjustments: (a) an adjustment for persons in Australia at the time of the Census who were not counted; (b) inclusion of an estimated number of Australian residents who were temporarily overseas on Census night, and (c) an adjustment for births, deaths and migration between 30 June and the Census date (8 August 2006).
- 'Family' is defined as two or more persons (at least one aged 15+) related to each other who are usually resident in the same household, even if one or more (but not all) are temporarily absent, whereas a 'household' comprises all usual residents of a private dwelling. Thus a couple where one partner was temporarily away would be classed as a couple family, not as a lone person.
- Where local government area (LGA) boundaries have changed since 2001, the 2006 and 2001 Census data presented here have been estimated by apportioning statistical local area (SLA) level Census data. The apportionment ratios are based on an analysis of collection district (CD) population, dwellings and land parcels.
- Where indigenous LGAs have been established since 2001, no 2001 Census data are available for these areas. Note that the 2001 data for the LGAs from which they were created are not directly comparable to the 2006 Census data for these LGAs. It is not possible to accurately adjust the 2001 data for these 'parent' LGAs to allow for the separation of the indigenous areas.
- Data on persons by family type are presented on a place of enumeration basis, as the family data on a place of usual residence basis exclude individuals temporarily absent on Census night, although they are taken into account in determining family type, and are included in the usual resident population for the area.
- In making comparisons between 2001 and 2006 for individual categories in a classification, the size of the not stated category should be considered, as in some cases the real change may be obscured or distorted. Likewise the exclusion of some categories of households may distort the change in household characteristics or size.
